

**THANK YOU FOR TRUSTING US WITH YOUR VEHICLE'S PROTECTION.
KEEP YOUR CERAMIC COATING LOOKING AND PERFORMING ITS BEST
FOR YEARS TO COME.**

HOW TO CARE FOR YOUR CERAMIC COATING

Cure Time: Allow the coating to fully cure for 7 days before washing or getting the vehicle wet. This ensures optimal bonding and protection.

Washing Tips: Use a pH-neutral car shampoo without waxes or additives. Your ceramic coating replaces wax so no need to apply wax or sealants on top. Avoid acidic or alkaline cleaners

Spot clean tree sap or droppings ASAP

Avoid washing under bright sun and avoid automated car washes with brushes to preserve the coating. Hand washing or touchless car washes are best. If pressure washing, 1200 PSI or lower recommended

How to hand wash using the two-bucket (with grit guard) wash method: one bucket with soapy water, one with clean water for rinsing your wash mitt to reduce swirl marks

1. rinse car with water
2. shampoo one section at a time from top to bottom/ cleanest to dirtiest
3. rinse & wring out wash mitt between each section
4. rinse off shampoo
5. dry

Dry the car after every wash to avoid water spots

CONGRATULATIONS ON YOUR 8-YEAR CERAMIC COATING

XPEL CERAMIC COATING WARRANTY HIGHLIGHTS

This product is covered for 8-years against oxidation, loss of gloss, UV damage and color fading. Full details: <https://www.xpel.com/warranty-information>
